Professional Summary

Data Science M.S. graduate (May 2026) with hands-on experience building end-to-end ML pipelines, multi-agent AI systems, interactive BI dashboards, and NLP applications. Proficient in Python, SQL, Power BI, Tableau, and Streamlit, with a track record of turning complex data into business-ready insights backed by statistical validation. Available on F-1 OPT for Data Analyst, Data Scientist, and BI Analyst roles.

Education

SUNY Polytechnic Institute

Master of Science in Data Science and Analytics

Aug 2024 – May 2026

Utica, NY | CGPA: 3.8 / 4.0

Sreyas Institute of Engineering and Technology

Bachelor of Technology in Electronics and Communication Engineering

Hyderabad, India | CGPA: 7.5 / 10.0

Technical Skills

Programming: Python, R, SQL

Machine Learning & AI: Scikit-learn, TensorFlow, XGBoost, ARIMA, LSTM, Prophet, Isolation Forest, Multi-Agent Systems, LLM Integration (Groq), Predictive Modeling, Hypothesis Testing (Wilcoxon, t-test)

NLP & Text Analytics: VADER, Sentiment Analysis, LDA Topic Modeling, Text Similarity, Lexical Analysis, YouTube Data API

BI & Visualization: Power BI, Tableau, Streamlit, Matplotlib, Plotly, Seaborn

Data & Cloud: Pandas, NumPy, MySQL, PostgreSQL, Excel, Git/GitHub, Jupyter, VS Code, Google Colab, Streamlit Cloud

Experience

SUNY Polytechnic Institute

Graduate Assistant

Aug 2024 – May 2026

Utica, NY

- Mentored graduate students on Python programming, data wrangling, and analytics coursework; supported faculty research with data collection, cleaning, statistical analysis, and visualization in Python, Pandas, and Excel.
- Built reproducible analytics workflows and reports that informed departmental decision-making and student-outcome tracking.

Academic Projects

AI Demand Forecasting Resilience System (Capstone)

Python, Groq LLM, XGBoost, LSTM, Prophet, Streamlit

- Built a 6-agent AI system that autonomously detects, diagnoses, and recovers demand forecasts under supply-chain disruptions on the Rossmann Store Sales dataset (1M+ records).
- Integrated Groq LLM with an offline classifier; autonomously handled 78% of disruption scenarios in under 10 seconds, saved 11 months of recovery time per event, and validated outcomes via Wilcoxon signed-rank tests ($p < 0.001$).

Multi-Model Disease Detection & Risk Classification System

Python, Scikit-learn, SVM, Random Forest, Plotly

- Built a unified ML pipeline (ColumnTransformer for imputation, scaling, encoding) to predict Heart Disease, Type-2 Diabetes, and COVID-19 ICU Admission across three medical datasets.
- Benchmarked 5 models (Logistic Regression, SVM, KNN, Decision Tree, Random Forest) on stratified splits using F1/ROC-AUC; designed Low/Moderate/High risk-classification layer with Plotly gauges for clinical interpretability.

NLP & Sentiment Analysis on K-Pop and R&B Music Data

Python, VADER, LDA, YouTube Data API, Plotly

- Applied VADER sentiment scoring, LDA topic modeling, and text-similarity analysis to 10K+ YouTube comments and song lyrics across artists to compare audience engagement and lyrical style across genres.

Certifications & Accomplishments

Python (Google/Coursera) • HTML & CSS (Coursera) • Cybersecurity Intern, Dexterity • AI Workshop, GDG
